## MID-MODEL DESIGN CHANGE

### AFFECTED PART: R2657P

#### WHAT TO LOOK FOR

Through market feedback and further investigation the Ryco team resolved an issue relating to a mid-model design change affecting the popular Toyota LandCruiser 70 and 200 Series diesel engine fuel filter and released the R2888P in August 2021.

The Ryco R2657P has previously been catalogued as the correct fuel filter for the 2019 onwards 70 and 200 Series model LandCruiser. This listing has been updated, with the addition of the R2888P, as the correct filter for 200 Series with a build date of April 2019 onwards and the 70 Series from January 2020 onwards.

The R2657P remains the correct filter for 200 Series applications up to and including build date March 2019, and the 70 Series up to December 2019. Please note these filters are not interchangeable.

**R2888P**  
RYCO FUEL FILTER

The updated fuel filter housing does not look greatly different, however the updated filter is 33mm taller and 4mm wider collar when compared to the R2657P.

The updated filter also incorporates a pre-filter design, providing enhanced separation of contaminants and an extra o-ring.

The R2888P was taken through extensive development and testing within the Ryco laboratory in Melbourne, following the Ryco Design Philosophy to meet or exceed the OEM specification.
